

### **Nauteek SC100:**

Perhaps designed more with the small sportsboat in mind than the dinghy, the Nauteek was recommended to us a functional piece of kit. It has a large screen to display its various functions and is designed to be mounted on a boat. The Nauteek SC100 can display the following:

- Speed Over Ground (SOG)
- Course Over Ground (COG)
- Countdown timer with one-touch synchronisation
- Display changes automatically after countdown timer
- Chronograph
- Chronograph starts automatically after countdown timer
- GPS position
- Statistics (trip, max speed, average speed, elapsed time)
- 14 hours recording capacity at 1 second intervals (recording capacity can be increased by increasing the interval)
- Waypoints (new waypoints, variation of course to next waypoint, detection of waypoint, goto next waypoint). This function will be available in 2008 for new devices and previously purchased devices via USB firmware upgrade

The Nauteek SC100 also has a bigger brother, the SC200, which is able to perform a number of additional tasks, including VMG, true upwind direction and distance to start-line as well as a host of others.

It is clear both of the devices have been designed by reducing the size, power needs and complexity of keelboat electronic tools. As such they seem to offer a great deal of useful, tools to the racing sailor.

**RRP SC100 £299.00**

**RRP SC200 £399.00**
