

## Chart your speed

Knowing exactly how fast you are going at any one point isn't just for big yachts with onboard electronics, now there are a whole host of mini GPS-based devices to give you time and distance, as well as an all-important speedo.

### **Nauteek**

New to this country, the Nauteek SC100 and SC200 tactical GPS units show speed, heading, countdown timer and more, all with a simple Velcro strap to pop around the mast or boom. It also has an 'action replay' function for viewing on your PC, and can be linked into Google Earth for a fresh view of your course. **RRP: £299 [www.exaqua.com](http://www.exaqua.com)**
